<p align="center">8 HARD DRIVE IMAGING</p> <p>8.1 Purpose</p> <p>To provide the proper procedures for the imaging of a hard drive or other digital media.</p> <p>8.2 Scope</p> <p>This document contains the procedures for the proper collection and preservation of digital forensic evidence. Making an image of a computer's or DVR's hard drive is not the same as making a copy of the hard drive. When a hard drive is copied, only the logical files are written onto the target drive. When an image is created from a hard drive, all of the information on the hard drive is written to the target drive, including the slack space, unallocated space and deleted files.</p> <p>8.3 Materials - Equipment (Hardware/Software)</p> <p>The following equipment and materials may be utilized:</p> <ul style="list-style-type: none"> • Computer hardware and software • Talon • Video players and recorders (analog and digital) • Conventional and digital cameras • Cell phones • Digital media (floppy disk, CD's, DVD's, flash cards, thumb drives, and hard drives) • Other image storage devices • Standard computer tools • Forensic imaging hardware and software <p>8.4 Limitations</p> <p>None for this procedure</p> <p>8.5 Safety</p> <p>None for this procedure</p> <p>8.6 Procedures</p> <p>8.6.1 Insert the evidence hard drive and target drive into the computer.</p> <p>8.6.2 Boot the computer in DOS using an approved forensic boot disk or Linux boot disk/CD.</p> <ul style="list-style-type: none"> • CAUTION: While the evidence hard drive is in the computer, the computer must not be booted in a Windows mode. Booting in Windows can change files on the evidence hard drive. <p>8.6.3 Make a mirror image copy of the evidence hard drive onto the target drive using the Safe back, Linux dd or Smart program located on the boot disk.</p> <p>8.6.4 Use write blocking hardware device or write blocking software to ensure that the evidence computer's drive is locked and unlock the target drive.</p> <ul style="list-style-type: none"> • CAUTION: Locking the evidence computer's hard drive ensures that the target drive cannot be accidentally copied onto the evidence computer's hard drive. Ensure that the evidence computer's hard drive is locked.
